RE: China RoHS2

To Whom It May Concern:

Regarding the information requested concerning Unified Wire and Cable products:

Unified Wire understands the "Administrative Measures for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products" commonly known as China RoHS2. This regulation restricts the use of 6 specific substances in electrical and electronic equipment sold in China.

These restricted substances are:

- Cadmium(Cd) and its compounds: 0.01%
- Mercury and its compounds: 0.1%
- Lead(Pb) and its compounds : 0.1%
- Hexavalent chromium (Cr6+) and its compounds: 0.1%
- Polybrominated biphenyls (PBB): 0.1 %;
- Polybrominated diphenyl ethers (PBDE): 0.1 %

Unified Wire does not intentionally add these substances to any of our product. As you may know, products made with antimony dioxide, and copper, may contain trace amounts of lead impurities.

Therefore, as of this date, the product we supply complies with China RoHS2.

Thank you for your interest in Unified Wire and Cable Products. If you have further questions, please contact your representative for Unified Wire and Cable.

Sincerely,

*Matt Allen*
